

NETWORK DEPLOYMENT

NETWORK DEPLOYMENT: **Agile Connectivity Anywhere**

Since 2003, TOURtech has been building and deploying temporary networks in some of the most demanding environments in the world. We are experts at bringing high-level connectivity to outdoor spaces, campuses and buildings quickly and efficiently with superior cost control.

APPLICATIONS

Wherever you need connectivity:

- Temporary structures, drive-in solutions, outdoor spaces and emergency management sites
- Live entertainment, concerts and festivals
- Expanding network capabilities outside of traditional venues and locations
- Meetings, conferences and outdoor working spaces
- Anywhere expanding networks can assist with social distancing and crowd management

FEATURES & BENEFITS

Secure and stable networks:

- Rapid deployment
- Proactive monitoring
- Network design and mapping
- ISP Procurement and Management
- On-site and remote technical support
- Expert installation teams experienced with challenging environments and demanding schedules

Creating Connected Communities

Live music festivals grew from just concerts to fully integrated user experiences. With capacities nearing a half million attendees, festivals required highly sophisticated wireless network solutions to provide point-of-sales systems, cashless payment processing, CCTV security, live streaming and secure access control. The problem: many festival sites were in challenging locations, had poor connectivity or had no connectivity at all.

Enter TOURtech's IT Services. We brought internet connectivity to some of the most remote festival sites and handled all of the internet traffic in a safe, secure and stable manner. With our technology, we enabled online transactions, smart security cameras and more. Our networks also enhanced the user experience for everyone on site, from festival goers to vendors to security staff. If we brought sophisticated connectivity to a 700-acre festival site, just imagine what else we can accomplish. We can help you meet your networking needs, whatever they may be.
